

BUILD YOUR FIRST PERSONAL PAGE

Quick Start!

HELLO!

- João Pedro Dias
- Porto, Portugal
- MSc in Informatics and Computer Engineering @ FEUP
 - 4th year student

- You can find me:
 - Webpage: http://jpdias.github.io
 - Email: jpdias@live.com.pt
 - LinkedIn: http://linkedin.com/in/joaopdias
 - GitHub: http://github.com/jpdias
 - Twitter: http://twitter.com/jpdlas

ANATOMY OF AN URL (LINK)

http(s)://

Hyper-text transfer protocol

www.something.com

Domain name

Is always translated to an IP(127.0.0.1)

/index.html

Specific webpage

WHERE CAN I PUT MY SITE?

• You will need to store your website to be public available. For this you will need a server.

- You can pay for it...
- Build your own server...
- Get it for (almost) free!

- GitHub Pages (https://pages.github.com/)
- You will need to know a little bit of git.
- 000webhost (http://www.000webhost.com/)
- You will get some ads.
- Some ways to get a website up using Dropbox (http://www.maketecheasier.com/4-ways-to-host-your-website-on-dropbox/)
- Some universities provide the service for free.

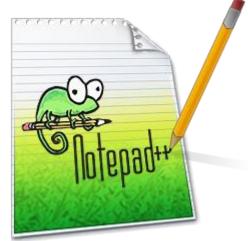

TOOLS

- Anything that can edit text
 - Notepad on Windows
 - Gedit on Linux
- Something more advanced like:
 - Notepad++
 - Sublime Text
 - Adobe Brackets
 - This tools will give you syntax highlighting that is really useful to write and read code.

BASIC FILE STRUCTURE

Example

- /site_folder
 - index.html
 - style.css
 - script.js

HTML

"HyperText Markup Language commonly referred to as **HTML** is the standard markup language used to create web pages. It is written in the form of **HTML** elements consisting of tags enclosed in angle brackets (like <html>)"

in Wikipedia

```
<!DOCTYPE html>
    -<html>
        <head>
          <meta charset="UTF-8">
        <title>
          My personal page!
        </title>
        <!-- Connect to CSS Style file -->
        <link rel="stylesheet" type="text/css" href="style.css">
10
        </head>
11
        <body>
12
          <!-- Page Content -->
13
        </body>
14
        <script src="script.js"></script>
15
      </html>
```

CSS

"Cascading Style Sheets (**CSS**) is a style sheet language used for describing the look and formatting of a document written in a markup language."

in Wikipedia

```
body {
    background-color: #e74c3c;
}

hl {
    color: blue;
}

p {
    text-align: justify;
}
```

JAVASCRIPT

"JavaScript is a popular programming language that's built into all the major web browsers and used to make web pages interactive."

in about.com

```
alert("I am an alert box!");
```

HANDS ON!

• Let's build something!

FREE RESOURCES

- Most of the times you don't need to start from scratch...
- ... you can find something you like
- ... and modify it the way you want to!

- Start Bootstrap Free Bootstrap Themes & Templates
 - http://startbootstrap.com/
- Templated
 - http://templated.co/
- Google for it! :D
 - You will find a lot more.

FINAL REMARKS

- By the end of this workshop you should now have:
 - More enthusiasm to build your own page
 - The basic tools and concepts
 - Knowledge of the resources available online
- The web is a wonderful place and you can contribute to it!

THANK YOU!
